

KURARAY POVAL™ 5-82 and 3-88 Now Produced in Frankfurt, Germany

We are pleased to inform that **the KURARAY POVAL™ 5-82 and 3-88** grades, previously only available at our production site in Niigata, Japan, **are now also produced in Frankfurt, Germany**. This expansion allows us to better serve our European customers with improved delivery times and enhanced logistical support.

KURARAY POVAL™ 5-82 and 3-88 are partially saponified grades of polyvinyl alcohol, known for their excellent film-forming properties. These characteristics add significant value to your products, making them ideal for a variety of applications.

Key Characteristics and Application Benefits:

- **Better Processability:** Dissolve more easily, even at lower temperatures, ensuring a smoother and more efficient production process.
- **Higher Solid Content:** Allow to produce higher solid content solutions, leading to faster drying speeds and improved overall efficiency.
- **Stability of the Solution:** Improved storage stability together with other ingredients in your formulations.
- **Energy Saving:** Less energy is required for dissolution and processing, that contribute to more sustainable and cost-effective production.
- **Co-Solvent Formulation:** Very stable in co-solvent formulations, enhancing versatility in applications.
- **Improved Water Sensitivity:** Ideal for temporary coatings with easier wash-off properties.

By producing these grades locally in Frankfurt, we can ensure a more reliable supply chain and quicker response times to meet your needs.

Thank you for your continued trust and partnership.
